Triad Boiler Systems, Inc New Type of High Efficiency Boiler!!

New Type of Triad High Efficiency Boiler:

We've been working on something very exciting and are giving you a heads up about it.

We're about to introduce a "Robust-Efficiency" package which is an extremely effective product that combines the high efficiency of a condensing boiler with the advantages of Triad's robust steel boiler.

We will do this by matching our [Series 2000 MBH Boiler](#) with a highly engineered stainless steel economizer to achieve efficiencies as high as 95%!

The advantage of condensing boilers are their high efficiencies, but this comes at the expense of higher equipment costs (sometimes with no payback), shorter lifespans, and more expensive ongoing maintenance. In addition to overcoming these issues, ***the "Robust-Efficiency" package allows for dual-fuel operation!***

This product will be very competitively priced, but also due to its ruggedness, ***will have a lower Life Cycle Cost because an expensive condensing boiler is not being replaced after only a few years.***

Stay tuned for more information and details. We haven't officially introduced it yet, but in the mean time, if you have an application please contact Vince Sands for more information and/or a quote.
